SUMMARY

Web Application Security Researcher with a strong full-stack development background and hands-on experience in bug bounty hunting, manual web application penetration testing, CTFs, and security research. Recognized by Glassdoor, Apple, and Sony for responsible vulnerability disclosure. Passionate about offensive security, security automation, and continuously improving application security through practical testing and research.

WORK EXPERIENCE

Independent Security Researcher

2022 – Present

- Reported multiple valid vulnerabilities through bug bounty programs, including a Critical vulnerability acknowledged by Glassdoor.
- Received responsible disclosure acknowledgments from Apple and Sony.
- Performed manual web application penetration testing focused on authentication, authorization, business logic flaws, API security, client-side attacks, and JavaScript analysis.
- Built custom Bash scripts and automation tools to streamline reconnaissance, endpoint discovery, and repetitive security testing tasks.
- Integrated AI-assisted workflows into reconnaissance, vulnerability analysis, JavaScript review, and report generation to improve testing efficiency.
- Regularly solve Capture The Flag (CTF) challenges and security labs to strengthen offensive security skills and stay current with modern attack techniques.
- Continuously research emerging vulnerabilities, exploitation techniques, and web security trends.
- Produced technical reports including proof-of-concepts, risk assessments, and remediation recommendations.

Full-Stack Development Projects

- Designed and developed secure full-stack web applications using React, Vite, TailwindCSS, Node.js, Express, and MongoDB.
- Implemented JWT authentication, RBAC, bcrypt password hashing, REST APIs, secure session management, CAPTCHA, Helmet security headers, input validation, sanitization, and environment variable management following secure coding best practices.
- Applied security-first development principles to reduce common web application risks and improve application resilience.

EDUCATION

Self-Taught Security Researcher & Full-Stack Developer

2022 – Present

Hands-on learning through bug bounty hunting, CTFs, web application security research, and real-world development projects.

SKILLS

- | | |
|---------------------------------------|----------------------------------|
| • Web Application Penetration Testing | • Burp Suite |
| • API Security | • Caido |
| • Authentication & Authorization | • DevTools |
| • Business Logic Testing | • AI-assisted Security Workflows |
| • JavaScript Analysis | • Nmap |
| • OWASP Top 10 | • ffuf |
| • Bug Bounty Hunting | • nuclei |
| • JavaScript | • Other Security Tools... |
| • Bash | • Linux |

AWARDS

- Apple Security Hall of Fame (December 2023)
- Critical Vulnerability Reported to Glassdoor
- Multiple Valid Vulnerability Reports through Bug Bounty Programs
- Published technical blogs and security write-ups
